

Stellar® Adjustable Sliding Jib Hooklift Hoists

SLIDER20-S

TECHNICAL SPECIFICATION GUIDE

The Stellar® Slider20-S hooklift loader is a container handling system mounted on a truck chassis that is capable of loading, unloading and dumping various containers with lengths ranging from 10' to 14' with the use of a sliding hexagonal jib.

The hex jib reduces flex and provides greater structural integrity. The Stellar Slider20-S has up to 20,000 pound capacity. The maximum dump angle is 72° with all hook heights on a 40-inch high truck frame.

This class of hooklift is known for its versatile design, ease of operation and popularity in the waste industry. All models of the Stellar Slider feature greaseable bushings, the Stellar patented dump/load interlock system, and an efficient low flow/high pressure hydraulic system. Rugged rear body tie-downs insure body stability when in transit). Stellar Slider hooklifts provide a full-length dump frame and rollers positioned throughout the loader, instead of saddles with wear pads. All Stellar hooklifts operate using in-cab controls. This allows for precise metering of the manual hydraulic valve while offering a clear and safe view of the operation through the rear window.

Our People. Our Products.

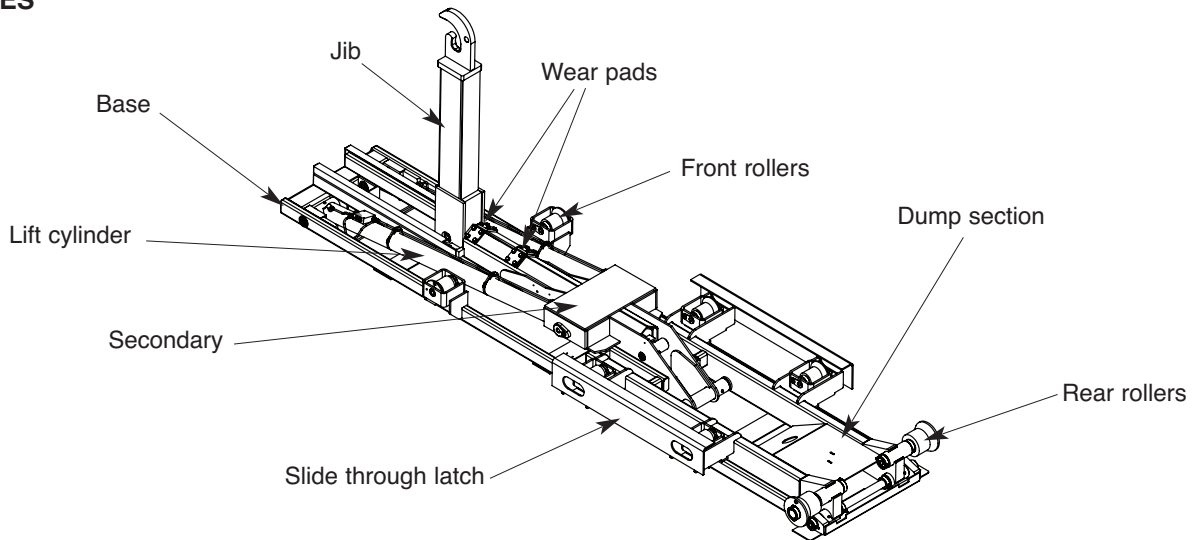

STELLAR® SLIDER ADJUSTABLE JIB HOOKLIFT HOIST

- Will accommodate bodies from 10-feet up to 14-feet long and still retain the maximum rated dump angle on a 40-inch high frame truck. Longer bodies may be accommodated with reduced dumping capabilities.
- Transmission-mounted PTO and hydraulic pump required to power the hooklift.
- Standard in-cab manual controls which allow for precise metering of the manual hydraulic valve. Solenoid-activated hydraulic control valve with electric remote control pendant is optional.
- Ten (10) gallon frame-mounted oil tank.
- Operating pressure is 4,500 psi.
- Hydraulic flow required is 25-gallons per minute.
- Patented dump/load interface as featured on most Stellar Hooklifts.
- Hydraulic locks to prevent cylinder collapse in case of hose failure.
- Slide through rear body tie-down latches.
- Plunger valve to prevent front jib movement when the dump frame is raised.
- Permanently lubricated and greaseable bushings used throughout.
- Grease zerks at all pin points to allow purging of contaminants.
- Carbon steel and zinc plated or type 17-4 stainless steel pins used throughout.
- All weldments painted with two-part polyurethane enamel.

Item Description	Slider20-S 35.63"	Slider20-S 54"	Slider20-S 35.63" or 54"
Lifting Capacity	20,000 lb. (9,071 kg)	20,000 lb. (9,071 kg)	20,000 lb. (9,071 kg)
Dumping Capacity	20,000 lb. (9,071 kg)	20,000 lb. (9,071 kg)	20,000 lb. (9,071 kg)
A. Dump Angle	60°	60°	60°
B. Effective Length	112"-142" (2,845-3,607 mm)	112"-142" (2,845-3,607 mm)	112"-142" (2,845-3,607 mm)
C. Cab to Axle	120" (3,048 mm)	120" (3,048 mm)	120" (3,048 mm)
D. Truck Frame Height	40" (1,016 mm)	40" (1,016 mm)	40" (1,016 mm)
Shipping Weight	2,800 lb. (1,270 kg)	2,880 lb. (1,305 kg)	2,910 lb. (1,320 kg)
Rec. Container Lengths	10' - 14' (3,048-4,267 mm)	10' - 14' (3,048-4,267 mm)	10' - 14' (3,048-4,267 mm)
Hook Height (Fixed)	35.63" (905 mm)	54" (1,372 mm)	-
Hook Height (Hyd.)	-	-	35.63" or 54" (905 mm or 1,372)
Min. Truck GVWR	25,000 lb. (11,340 kg)	25,000 lb. (11,340 kg)	25,000 lb. (11,340 kg)

■ KEY FEATURES

Base section

The base section of a Stellar Slider may also be called a sub-frame. All Stellar Slider hooklifts are tied together in one common framework. This base section not only adds strength to the hooklift, but it places less stress concentration on the truck chassis than hooklifts without a common base. The base section provides for simple installation on most truck chassis.

Latches

Inside and or outside latches available.

Jib/secondary

The sliding jib allows for a wider range of container lengths and a means to control the truck's weight distribution while remaining in the latches. The jib and secondary booms are hexagonal shaped to reduce flexing, adding to structural integrity.

Wear pads

Easily replaceable wear pads for the jib/secondary boom assemblies that can be changed in minutes. Not necessary to disassemble hooklift to replace wear pads. The wear pads ensure long life for the jib/secondary assemblies.

Dump section

Dumping is accomplished through rear pivot point. Jib and dump sections must lock together to support the full length of container/body when in the dump mode.

Skid rollers

These three sets of rollers allows skid to roll freely forward and backwards while operating the jib. Prevent long sills from wearing prematurely, not dragging steel on steel. Also eliminates the need to replace wear pads on base frame.

Bushings and zerks

Bushings and grease zerks at all pivot points.

Counterbalance valves

Counterbalance valves are used on all cylinders, protecting both extend and retract functions in case of a hydraulic hose failure.

Pins

Carbon-steel and zinc-plated or type 17-4 stainless steel to prevent corrosion.
